

TECHNICAL BULLETIN

Last Revision: January 2016

Subject: **UL 2218, Class 4 Impact Certification for StormMaster Shingles**

This is to certify that the StormMaster Series of SBS asphalt roof shingles as made by Atlas Roofing Corporation, meet or exceed the performance requirements of the UL 2218 Impact Resistance Test Standard, Class 4, at the time of manufacture. The UL 2218 test evaluate the effects of impacts upon materials in laboratory conditions. Atlas Roofing Corporation does not warrant product performance to real life hail or other impact conditions. The nationally recognized testing protocols performed in the UL2218 are for product comparison purposes only.

The StormMaster Series of SBS asphalt shingles are:

- StormMaster Slate
- StormMaster Shake

The UL 2218 testing protocols require specific minimum performance results when exposed to the testing procedures of the UL 2218. Both the StormMater Slate and StormMaster Shake shingles are rated with a "Class 4 Impact Resistance" per UL 2218 test standard. Class 4 is highest impact rating possible for all roof covering materials.
