

Technical Bulletin

Gutter Covers and Atlas Asphalt Shingles

This Technical Bulletin outlines Atlas's position regarding the installation and performance of our product, Atlas shingles, in regards to the use of gutter covers.

Atlas suggests that homeowners not attempt to install gutter covers themselves unless they can obtain installation instructions from the gutter cover manufacturer. Atlas recommends to have gutter covers installed by a professional installer who is familiar with good roofing practices.

In most instances, gutter cover products that are installed in accordance with good roofing practices and in accordance to the written gutter covers installation instructions do not have an impact on the Atlas asphalt shingle warranty. However, avoid installation gutter covers when the application instructions require:

- Installation of gutter covers that require fasteners that penetrate the shingles that hold the gutter in place.
- Removal and replacement of shingles during installation.
- Removal or elimination of drip edge.
- Trimming, cutting or modifications to the shingles.
- Removal of or installation under the underlayment.

The Atlas Roofing Limited Shingle Warranty and the Atlas Signature Select Limited Warranty exclusively covers manufacturing defects of the Atlas shingles, and does not cover the gutter covers or damage due to their installation.

Please refer to the Atlas Limited Warranty for detailed warranty coverage. If there are any additional questions or concerns, please feel free to contact Atlas.
